Aula 5

Estrutura de Dados

Prof. Vinicius Pozzobon Borin

Conversa Inicial

- O objetivo desta aula é apresentar os conceitos que envolvem a estrutura de dados do tipo grafo
- Será mostrado como realizar as manipulações dos dados dentro de uma estrutura de grafos, como construir o grafo e como buscar e andar pelos vértices de um grafo
- Representação de grafos:
 - Matriz de Incidências
 - Matriz de Adjacências
 - Lista de Adjacências
- Descoberta do grafo:
 - Algoritmo de busca em profundidade
 - Algoritmo de busca em largura
- Caminho mínimo do grafo:
 - Algoritmo de Dijkstra

Grafos: Definições

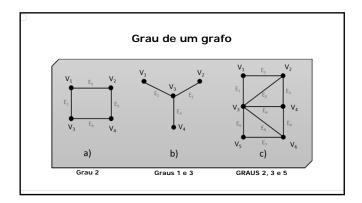

4 ▶ ⊕ (

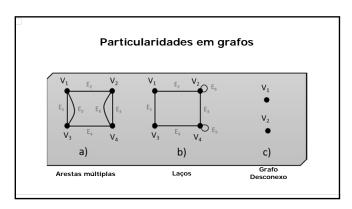

Grafos

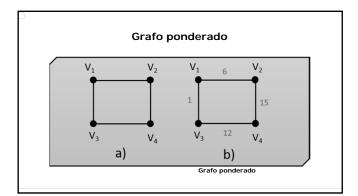

Um Grafo G é um conjunto de vértices conectados por meio de arestas sem uma distribuição fixa ou padronizada

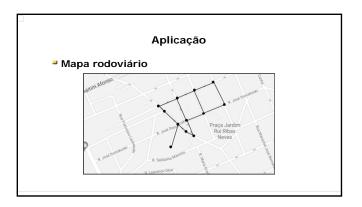

Grafo completo Grafo completo

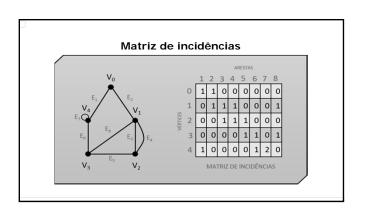

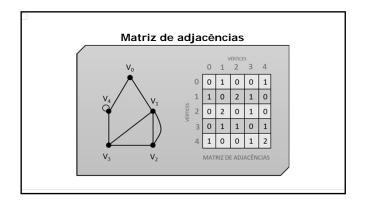

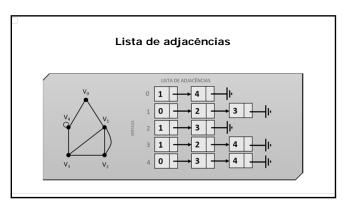

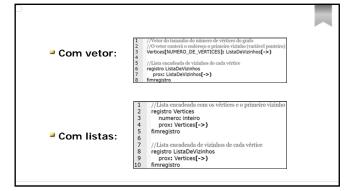

Representação de Grafos

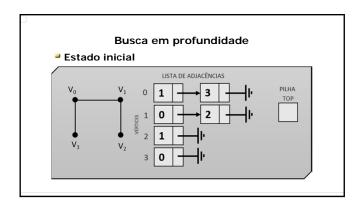

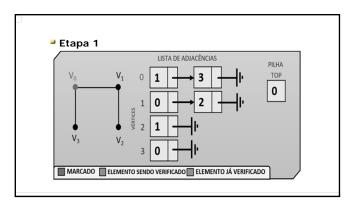

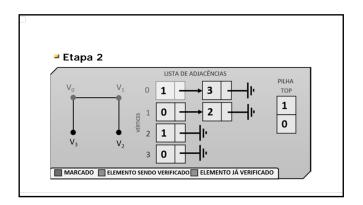

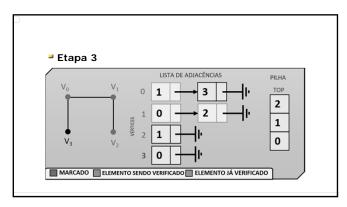

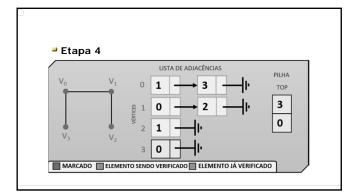

Algoritmo de Busca em Profundidade no Grafo

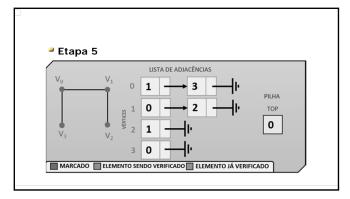

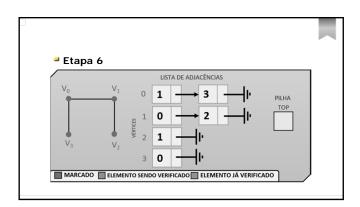

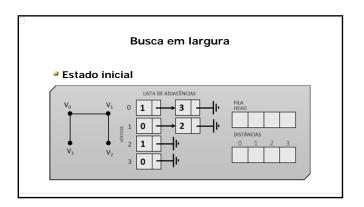

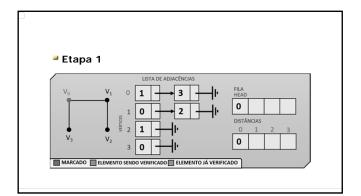

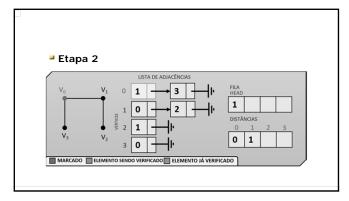

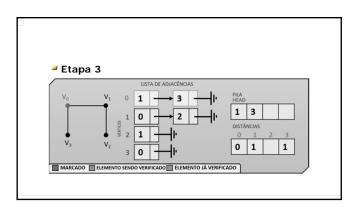

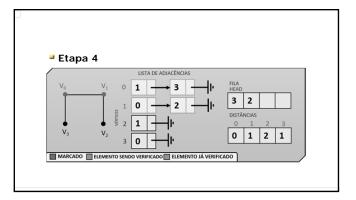

Algoritmo de Busca em Largura no Grafo

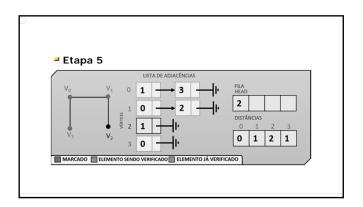

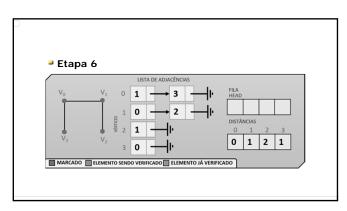

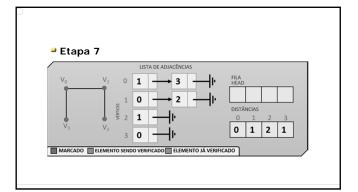

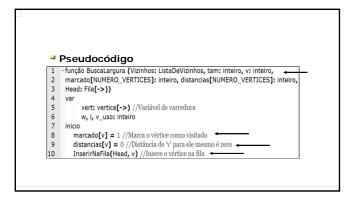

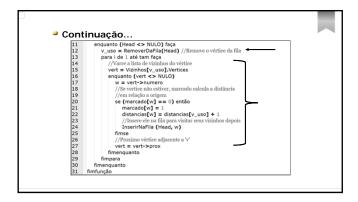

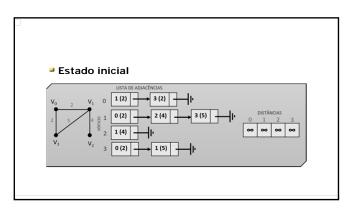

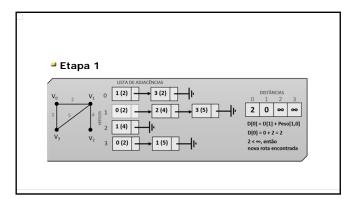

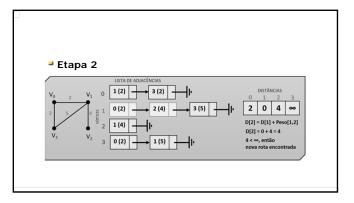

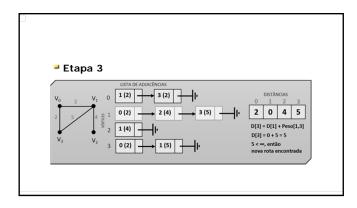

Algoritmo do Caminho Mínimo em Grafo: *Dijkstra*
